Customers are reminded that while the Water District Crew may not be flushing hydrants in your immediate area, a loss of pressure or discolored water may result in all sections of the water system for the duration of the flushing operation. Therefore, to prevent problems, users are advised to avoid using washing machines during daytime hours whenever possible. Flushing water mains and hydrants is necessary in order to properly maintain the water system. We regret that these operations may inconvenience water users. Thank you for your cooperation.

The Rumford Water District will not be responsible for damage to piping or appliances not equipped with proper vacuum breaking valves in working condition.

John Halacy  
Superintendent
